### **BRAND CULTURE**

# QUALITY OF KAWASAKI SPORT WITH PASSION

# INTRODUCTION

KAWASAKI brand was founded in Japan in 1896, and involved in many fields with good performance, such as aerospace, heavy industry, motorcycle, marine, transportation, etc.

KAWASAKI sports industry was founded in 1915, and now is one of the world's leading brands. Shenzhen Chuanqi Sports Co., Ltd. was built up in year 2002, is an international sporting goods company. The company owns KAWASAKI Sporting Goods trademark in the Asia-Pacific region for research and production bases with international standards. It mainly specializes in Badminton and Tennis, including Tennis rackets, badminton rackets, shoes, shuttlecocks, bags and clothing and other badminton accessories.

In 2009, KAWASAKI invited international badminton coach Li Mao for KAWASAKI global badminton skills consultant. In March of 2013, KAWASAKI International Badminton Club was established in Malaysia. In 2014, it has moved back to Shenzhen China. With positive spirit, Shenzhen Chuanqi Sports is leading KAWASAKI badminton into world top brand.

### **COMPANY VISION**

Being An Outstanding Sports Enterprise in Sports Industry.

# COMPANY MISSION C

Bring healthy and happy life to people, and make contributions to social progress.

## **COMPANY SPIRIT**

HONESTY, INNOVATION, EFFICIENCY, COOPERATION

HONESTY: Reliable and Modest
INNOVATION: Creativity and Unique
EFFICENCY: Practical and Implementation
COOPERATION: United and Win-Win

## SENSE OF VALUE

D&R, Production and Sell Top Quality Products for Customers.

Honesty, Reliablity and Modesty Is Our Important Moral Value.

Keep Innovation, Improvement Is The Source of Our Company Development.

Try Best to Offer Our Customers and Partners Best Service More Than Their EXPECTATION Is Our Most Important Duty.

Respect Every One, Cooperate with Sincerity and Creat A Better World to Live Together.

#### **KAWASAKI International Badminton Club**

Kawasaki Badminton Club, referred to as KBC, is founded in March 2013 in Malaysia by Shenzen Chuanqi Sports Co. Itd. It is the first international professional training club, on behalf of Kawasaki to challenge in various international tournaments in the world. In Aug 2014, KBC relocated from Malaysia to Shenzhen Kawasaki headquarters. The coaches team is now led by famous badminton coach Li Mao, (Head Coach of China National Badminton) to provide professional training and guidence for world badminton players, and improve their comprehensive strength to compete in International tournaments.

# TECHNOLOGICAL MATERIALS OF RACKETS

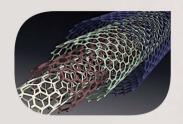

In the stress concentration area of the racket, the "KRAIBON" cushioning damping material from Germany is applied to help buffer and disperse the excessive force to carbon fiber layers and improve its high tension ability. The excellent shock absorption performance of the material also helps to improve the aftershock frequency after the racket smash and improve the comfort of the racket.

#### 80THI-MODULUS

The best high-density carbon fibre material available. It has superior mechanical properties, highcoeffi-cient, high modulus, light weight, fastvibration attenuation, high sensitivity, strongrigidity and torsion resistance index.

#### 46THI-MODULUS

Special high-density carbon fibre with superior mechanical properties: highcoefficient, high modulus, light weight, fastvibra-tion attenuation, high sensitivity, strongrigidity and torsion resistance index.

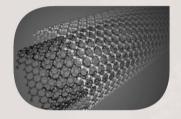

Graphene is a kind of hard material, and the shaft made by it with carbon fiber has high elasticity and toughness properties.

#### 40THI-MODULUS

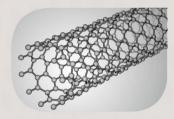

High-density carbon fibre with superior mechanical properties: highcoefficient, high modulus, light weight, fastvibration attenuation, high sensitivity, strongrigidity and torsion resistance index.

#### 30THI-MODULUS

Lightweight and high strength carbon fibre. Provides superior strength for the racquet while doing so by controlling the weight of the racquet.

KERNEL POWER

By using super high polymer into frame inner instead of traditional pressure expansion, the high polymer is transformed to strong inner power with cushioned structure under high temperature and pressure, and inflation pressure, which can effectively improve racket strength, and with more stable hit, and reduce racket vibration frequency as well.

#### SYSTEM

Ability to quickly change the racquet balance point withoffensive and defensive gameplay. Canswitch to head heavy when smashing. After smashing the racquet switches to head light mode automatically allowing for faster reaction time.

#### GRAPHENE TERMINDILDEY

Graphene is one of the world's thinnest and most rigidnano materials, representing the world's leadingscien-tific and technological crystallization. Theracquet frame makes use of the optimal combinationof graphene and carbon fibre technology togreatly enhance both the strength and resistance of the racquet.

NANOMETRIE CARBOI

Imported Japanese Toray dense carbon fiber, with smaller deformation character, preventing carbon fiber viscosity, combination, and surface defects, which largely increases overall strength and toughness of the racket, and effectively reduces racket broken rate, and with better hitting sound.

Carbon yarn is made by hotmelt technology to help make the nano resin more evenly distributed.

Resin materials at a nano level are used to allow thefine particles to penetrate into the gaps of thecarbon material evenly. This strengthensthe structure of carbon material to make the frame of the racquet withstand greater pull.

纳米科技

**NANI**TECHNOLOGY

CO AUTHARITE CARROLL

This Racket has added fullerene carbon to reinforce the frame. Fullerene is a newly discovered industrial material, with its stiffness even stiffer than diamonds, and Ductility and Malleability are 100 times higher than steel. Rackets with Fullerene carbon are stiffer, less torque, and with faster rebound speed and sharper hitting sound.

## COMPOSITE CARBON

By selecting material with different physical properties to balance rackets stiffness and toughness, and improve its comprehensive performance.

#### UNIVERST!

Greatly enhance the racquet strength and toughness, improves control by 30% to enhance both attack and defence.

#### 

Aircraft-grade woven materials. It is wovenfrom a high modulus coefficient of carbon fibreand nanoepoxy resin. The technology provides the racquet with superior stability and allows the racquet tobe at equilibrium at all angles of force.

TOTA EVASTO STAFT EVALUEUEE

Combining with high elastic nano-epoxy, through highprecision balanced hot-melt adhesive and CNC precision combining technique to make shaft rigidity error control within +/- 0.1mm. Consistent with rebound power, smashing with gunfire feeling.

**GRAPHITE** CRYSTALLITE

Graphite microcrystalline fiber combining with new generation epoxy, with stronger tensile modulus ratio and strength to withstand rigorous dynamic testing (such as high temperature and high tension, hitting, dropping) to ensure the racket durability.

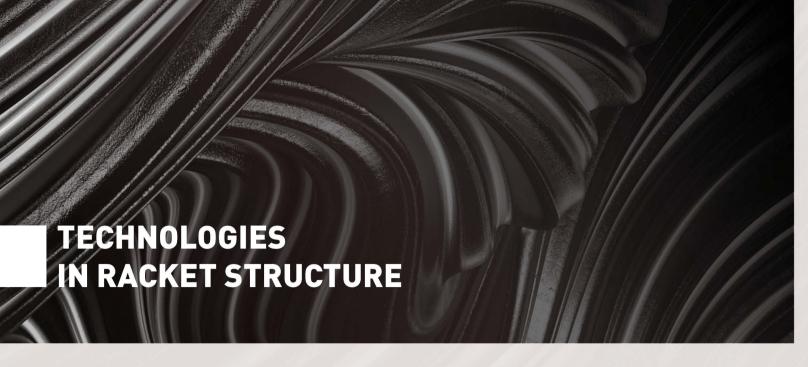

2 IN 1 Frame: Racket frame 5 and 7 O'clock uses windbreaking type to reduce resistence during smashing, and head frame adopts box type to increase potential energy for smashing. Racket frame can bear maxium 35 lbs tension stably.

SUPER LIGHT

Use high quality carbon fibre with high intensity to ensure the racquet is both lightweight and strong. The ultra-light racquet helps to improve player response time

007 ensure the racket durability. tension s

Mech reinforced composite racket frame is developed after multiple tests through computer simulation to calculate the power area and directions when racket face is in impact, and can form support force automatically, with more stable, powerful and accurate characters for hitting.

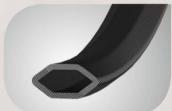

**ACCELERATE** FRAME

Shaft formed twice with inner and outer rings. Inner core is made of dense carbon fiber, and shaft with such inner core has more powerful and stable character, which effectively improves shaft reset speed.

Through mathematical model analysis, create a new hexagon frame structure based on traditional stable frame, which makes the racket surface is more stable with sharper feeling.

7 JOIN POWER

Torsion is one of most important data for rackets level. King Series racket use Special T technology, shaft and frame connected seamlessly, which improves 35% of rackets torsion , smashing power more directly with clear sound, the racket surface is super stable, comprehensively improving the accuracy and explosive power of the racket.

Rounded smooth airfoil structure can efficiently reduce the powerful wind-breaking and improve swing speed.

**INCREASE SWEET SPOT** 

Frame grooves design increases 10% bigger sweet spot of racket than traditional one by same frame size. Bigger sweet spot can improve rebound quality, and keep racket controlling flexibility.

The sharp trapezoidal structure helps users to improve swing speed, and effectively enhance the structural strength of the racket frame, allows the users to control balls more precisely and heat more accurately.

Reinforced CORE

Shaft formed twice with inner and outer rings. Inner core is made of dense carbon fiber, and shaft with such inner core has more powerful and stable character, which effectively improves shaft reset speed.

Wind-breaking joint design can effectively reduce the wind resistence to help racket more flexible and faster, and improve racket controlling feel.

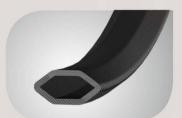

**AC** counterweight

AC precision counterweight system can accurate racket carbon fiber distribution and weight ratio more even and balanced, with stronger explosive power.

**(HEXAGONAL**FRAME

Provide powerful wind-breaking support which enhance the racket strength effectively, and improve the accuracy of controlling and hitting .

**OVERSIZE** FRAME

The first patented racket in the industry, the sweet spot is 23% larger than common one ,which helps users capture shuttlecocks effectively.

SILMFRAME

10% smaller than the traditional racket frame, effectively improving the racket speed and enhancing the explosive power of the racket sweet spot .

Diamond shape is innovatively adopted to create a stable structure, greatly enhancing the stability of the racket surface, and increase the hitting power by reducing wind resistance.

Thick and strong box-shaped frame greatly improves the racket frame, provides high torque support for the racket, and greatly enhances control of the racket.

40 SYSTEM

4D focusing system can improve the hit rate by 40% higher than common racquet, and can effectively help beginners to identify the racket sweet spot.

SUPER ELASTIC SHAFT

With high elastic carbon fiber, the shaft of racket has good rebound performance, which can improve hitting feel when smashing.

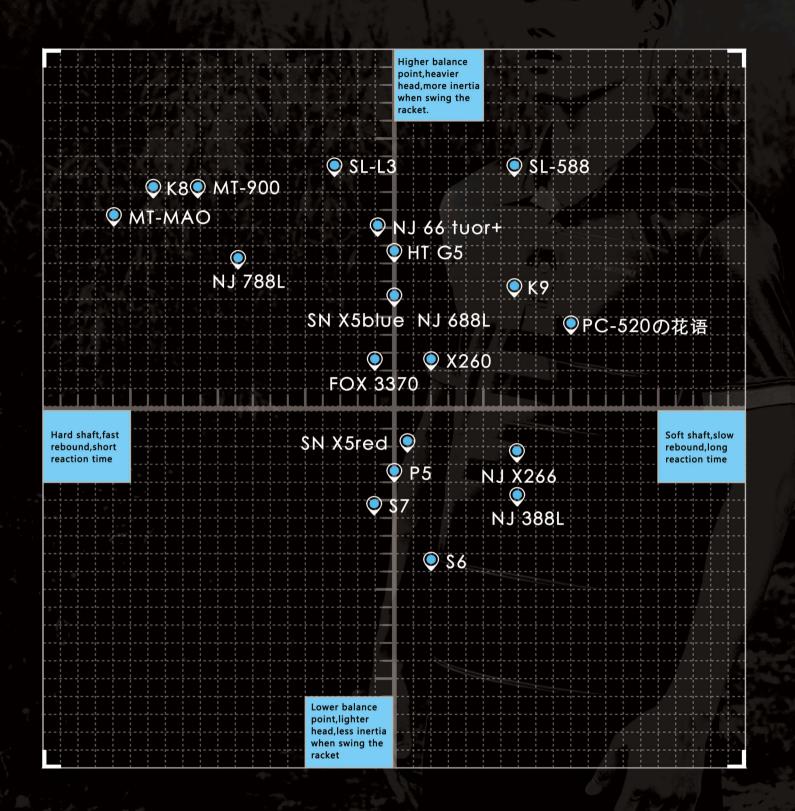

010

Using high rigidity carbon fiber with diameter of 6.5mm shaft , which brings stronger and faster rebound speed ,and good flexible experience when playing.

The master series will be upgraded in 2020, adopting the Mech reinforced composite frame, and the inner frame also reinforced. The racket face is more stable and reliable when the rackets impacted by force. Meanwhile, the master series racket using the nanometric carbon fiber imported from Japan, and the core part is added with C60 fullerene carbon. The shaft adopts the twice forming process to enhance the stiffness. With high stability and explosive power, the master series helps players to make precise control, and got the most advantage to win with fast smash.

BLADE FRAME

GRAPHENE TECHNOLOGY

Graphene woven shaft is a technology originally used in high level golf. and now used in badminton racket after innovation. Graphene is a very hard material, the shaft made combine with carbon fiber has the characteristics of rapid recovery, super elasticity and super toughness.

The racket adopts the blade frame, using the principle of aerodynamics to refine the air flow and have better breaking

effect; combined with the high-quality shaft of the racket,

which greatly improve the attack performance while ensuring

the extreme speed.

**TECHNOLOGY** 

Using imported nano hot melt technology, which spread resin more evenly, and minimize the the deformation of carbon fiber, clearer power transmission of racket, which lead better feel of the racket.

# Details determine Success or failure

#### **Details determine success or failure**

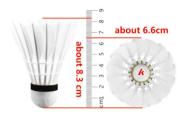

Manufacture according to extremely fine and strict production process to make sure that each badminton weights the same.

One of the basic requirements to badminton ball is the suitable weight, or the player could not fully exert his skills.

Strictly implement the badminton international standard size so that you could exert best in the game.

The speed of badminton ball has great relationship with its weight and caliber size.

After the test, in the same environment, when badminton is about 8.3 cm long and the aperture size is about 6.5 cm, the ball has the most ideal speed.

The unique glue formula to ensure the resistance to fight and flight stability.

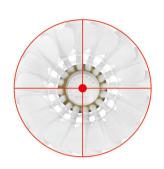

Kawasaki badminton has much glue and strong enough to ensure it is durable.

But common badminton has little glue and not strong enough to play.

The whole raw footage and the ball head are coaxial to be sure the ball flies more

The whole raw footage and the ball head are coaxial, which is the base to ensure the badminton flies stable.

large square medium square small square humpbacked

The feather is arranged neat

All pieces of feather are in the same length and evenly spaced to ensure the flight is more stable.

Finely manufactured with proper glue covered to strengthen the performance of the resistance to fight and flight stability.

The tether is thick and strong

The head of ball is wrapped with sheepskin membrane to make the feather more tight, which is sure of the ball is durable.

There are multi head for Kawasaki badmintons to choose to adapt to the needs of different players.

Thri-matching cork

Composite cork

**Natural cork** 

Different types of ball heads to meet different requirements.

The ball head it standard sphere to ensure the stability of flight and avoid swing.

#### **Advantages of King Kong**

No matter in the production process or the production cycle, it is far better than the traditional badminton

The badminton production process reduces 20 steps

The badminton production cycle is shortened 90%

Traditional: 30 Days KingKong: 3 Hours

The world's first automatic badminton production lin

cycle is shortened 90%

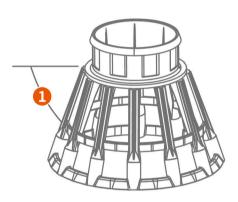

The badminton production

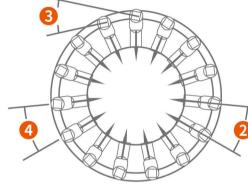

The material utilization is increased by 35%

The product life is increased by 80%

# **Excellent specifications of little King Kong**

#### The taper of the badminton is uniform

The hair planting frame of the little King Kong badminton is designed by a computer, the angle between each hair planting rod and the ball head plane is certain, and after the hair planting frame is formed by injection molding, the taper of the hair planting rod is uniform.

#### The angle between the two adjacent hair planing rods is uniform

The hair planting frame of the little King Kong badminton is computer generated, and is formed by injection molding, the angle between the two adjacent hair rods can be controlled in the range of the tolerance almost not affecting the performance of the badminton.

#### The angle between the two adjacent feathers is uniform

The angle between the two adjacent feather vanes of little King Kong badminton is set by the angle between the square hair planting tubes, after sorting, the relatively consistent short feathers are planted into the above hair planting tubes, and the angle between two adjacent feather vanes are relatively uniform.

#### The spacing between the two adjacent hair rods is uniform.

The spacing between the two adjacent hair planting rods of little King Kong badminton is almost uniform.

## **KPU Durable Upper + Stable Frame Structure:**

Provides perfect protection, wrapping and breathability.

Integral molding shoes has lighter weight and longer service life than traditional shoes.

## Carbon Fiber Balance Cushion:

light and sturdy, toughness and hardness are more than 2 times than that of ordinary PE balance cushion, which can improve the anti-torsion performance of the sole, keep the space of the shoe cavity stable and non-deform, and avoid the foot injures in movements

## Heel High Resilient Cushion Material:

Provides most comfortable cushion protection for heel landing, and maintain strongest power transfer for jumping.

#### Parametric Design For Outsole Pattern:

With light weight, good wear-resistance features, and with optimal performance.

## Forefoot Resilient Cushion:

Instant activation provides better resilience and more comfortable landing.

#### **TPU Support System:**

High elastic EVA + Popcorn elastic pad + TPU antitorsion flat + stable carbon fiber

# ANTI-TWIST

WEAR-RESISTING
MASTER SERIES
K-527

KPU Durable Upper + Stable Frame Structure:
Provides perfect protection, wrapping and breathability.
Integral molding shoes has lighter weight and longer service life than traditional shoes.

# ANTI-TORSION & BREATHABLE FLYKNIT SOCK DESIGN

Shoes top line and upper uses flyknit sock design with more comfortable feel. Integral flyknit mesh technology maximize shoes wrapping and breathable performance.

#### **Initiate Technology**

The outsole grooves are designed scientifically based on the study of "start" principals, and enable shoes start stably and fast.

## Stable TPU Structure Supporting Pad

Scientifically use mechanical structure in design, with super anti-torsion and anti-rotation characters to efficiently protect foot arch.

## STABLE AND BREATHABLE FLYKNIT UPPER

JuFeng K-525

#### Flyknit Upper + TPU

The upper is made of high-density integrated flyknit material, light and soft, with TPU protective translucent hot melt film to enhance the upper wrapping performance.

#### **Dual TPU Anti-Twist System**

Dual TPU is applied in foot arch part design, which effectively prevents the shoes distortion and foot sprain in movements.

#### **Carbon Fiber Stabilizer**

External carbon fiber stabilizer, which keeps the shoe cavity perfectly balanced and stable.

#### **Anti-rollover Claw Design**

Avoid side-slip sprains and increase shoes stability.

# DURABLE AND BREATHABLE

**NINJA K-358** 

Shoes upper is made of mesh with high impact dual-colors, which is durable and breathable, and with great wrapping feel.

Anti-rollover claw design avoids side-slip sprains and improves shoes stability.

Scientifically use mechanical structure in this shoes design, with super anti-torsion and anti-rotation features to protect foot arch efficiently.

#### KSB-65TI

Name Badminton strings Color White . Pink . Blue . Yellow Length 10 m 0.68 mm Materials String core High strength elastic multifilament fiber Superfine elastic multifilament woven fiber bundles Surface Novel hydrogen titanium alloy and elastic resin Drape

Characteristic

The high strength elastic multifilament fiber as the base line center, the outer material is the superfine elastic multifilament woven fiber bundles, with excellent elasticity, crisp and strong ball hitting sense, the coating layer adopts hydrogen titanium alloy technology, providing first-class shock absorption, wear resistance and high

#### **KSB-68**

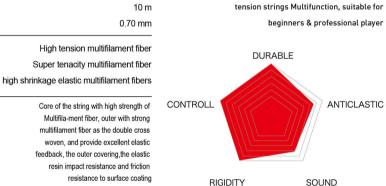

Name Badminton strings Color White . Black . Purple . Yellow Length 10 m Materials 0.70 mm String core High tension multifilament fiber

Characteristic

Surface

Drape

Core of the string with high strength of Multifila-ment fiber, outer with strong multifilament fiber as the double cross woven, and provide excellent elastic feedback, the outer covering, the elastic resin impact resistance and friction resistance to surface coating

Good durability , suitable for cold

weather, Strong rigidity & not easy retreat

Advantages

#### **KSB-60**

Characteristic

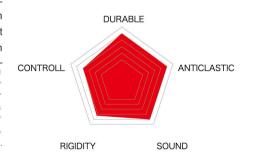

Name

Color White . Black . Blue . Orange Length 10 m Materials 0.72 mm String core Nylon multifilament yarn Surface Elestic nylon multifilament Drape Sliding nano elastic resin

The center core made of ultra strong multifilament, its durability greatly improved after compression, the outer layer with a plurality of elastic filament cross woven, the outermost layer using "nano" elastic resin, makes moderate performance for hitting sound and feed-back strength

Badminton strings

Advantages Moderate elasticity and feel. Sound well when hitting. Smooth surface, easy for strings.

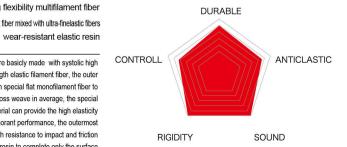

#### **KSB-80**

Name Badminton strings Color White . Black . Bule . Yellow Length 10 m Materials 0.68 mm String core Strong flexibility multifilament fiber Surface Special flat monofilament fiber mixed with ultra-finelastic fibers

Characteristic

Drape

The core basicly made with systolic high strength elastic filament fiber, the outer with special flat monofilament fiber to tcross weave in average, the special material can provide the high elasticity and sonorant performance, the outermost layers, with resistance to impact and friction of elastic resin to complete only the surface. Advantages Light& thin ,easy for strings. Top material elasticity and sound well. Strong rigidity & not easy retreat tension

#### **KES-800**

#### **Automatic Badminton Racket String Machine**

Specification: Oval-shaped working frame for Badminton ,Automatic three-jaw Support system, Computer - straight pull, the patent removable electronic box, Induction type starting switch, aluminum alloy bottom plate, Semi hidden drawer, Adjustable turntable damping.

Patent:

gyroscope string wheel ,Adjustable frame beat rotating disc damper, Multi point support of oval -shaped frame automatic three-jaw support, Spring clamp lightweight base, Aluminum Alloy tripod support, electroforming type diamond sand clamp.

Characteristic: LED operating board, computer control machine, accurate tension, easy correct tension parameter.

Setting the precise tension from 11 to 45 LBS ,the precision is 0.1LB/

KG .4 sets data of tension memory. KG/tension fast conversion button.

Three speed choice, with a special button knot.

Can be set to eliminate the pull function of tension (10% 20%) to use a different strings, avoid the problem and losing tension.

Electroforming diamond sand clamp, good clamping = and is not easy to break the strings, suitable for various specifications of strings.

Induction type starting switch, convenient operation.

Strong oval-shaped frame, strong support to avoid deformation. External electronic box.

Universal power supply ,voltage range 110V-240V.

#### **KES-830**

#### **Automatic Badminton Racket String Machine**

Specification: Badminton universal synchronous frame racket, three-claw badminton fixation frame racket system, computer-direct tension type, patent removable electronic box, induction type bead clip starting switch. screw synchronous frame racket adjustment system, low profile aluminum alloy foot bottom plate, semi hidden drawer, adjustable turntable damper.

Patent:

Patent gyroscope pull wire wheel, adjustable frame racket rotating disc damper, patent simultaneously movable frame racket middle column screw, adjustable angle type frame supporting seat, patent automatic elastic open wire clip base, lightweight aluminum alloy tripod group, electroforming type diamond sand clamp.

Characteristic: The screen is digital LCD blue display, and the subtitles are clear, not affected by external light, which can record the wire pulling number.

The pound is controlled by computer, which is accurate, the push-button type pound correction is easy to operate.

The pounds can be set quickly, which can be from 11 pounds to 40 pounds, 9 pounds of pounds memory.

The wire pulling speed is divided into a variety of speed settings: 10%-100% Can set a variety of wire extension functions 0%-20%.

A special button for knot tving is set.

Straight line and horizontal line special setting button.

Induction type bead clip starting switch, easy to operate and durable.

Function of automatic detection of faulty items.

Machine head external discharge type electronic box.

Universal power supply, applicable voltage of 110v-240v.

#### **KES-850**

#### **Automatic Tennis & Badminton Racket String Machine**

Specification: Tennis badminton universal synchronous frame racket, three-claw badminton fixation frame racket system, computer-direct tension type, patent removable electronic box, induction type bead clip starting switch, screw synchronous frame racket adjustment system, low profile aluminum alloy foot bottom plate, semi hidden drawer, adjustable turntable damper.

Patent:

Patent gyroscope pull wire wheel, adjustable frame racket rotating disc damper, patent simultaneously movable frame racket middle column screw, adjustable angle type frame supporting seat, patent automatic elastic open wire clip base, lightweight aluminum alloy tripod group, patent quick release type tennis badminton changing system, electroforming type diamond sand clamp.

Characteristic: The screen is digital LCD blue display, and the subtitles are clear, not affected by external light, which can record the wire pulling number.

The pound is controlled by computer, which is accurate, the push-button type

pound correction is easy to operate.

The pounds can be set quickly, which can be from 11 pounds to 88 pounds, 9 pounds of pounds memory.

The wire pulling speed is divided into a variety of speed settings: 10%-100%.

Can set a variety of wire extension functions 0%-20%. A special button for knot tying is set.

Straight line and horizontal line special setting button.

Induction type bead clip starting switch, easy to operate and durable.

Function of automatic detection of faulty items. Machine head external discharge type electronic box. Universal power supply, applicable voltage of 110v-240v.

#### **Automatic Tennis & Badminton Racket String Machine**

Specification: Tennis and Badminton general frame, Intelligent-straight pull type, patented detachable electronic box, pull-head touch button, low outer aluminum alloy bottom plate, semi-hidden drawer, adjustable turntable damping, external adjustment gravity clamp base.

Patent:

Patented gyro stringing reel, adjustable frame oscillating damper. adjustable angle frame support, patented automatic pop-up clamp base, lightweight aluminum tripod, high-sensitivity touch button, patented retractable Turntable pillar, free hand-adjustable gravity clamp base.

Characteristic: LED operation panel, intelligent control stringing puller, accurate pounds, easy to correct pounds;

Accurate tension setting, from 11-45LB (5-20KG), precision of 0.1LB/KG, 4 sets

of pounds of memory; Kg/lb quick change button;

The three-speed stringing speed can be selected, and there is a special button for knotting;

The string function (10% 20%) that eliminates the string tension can be set to use different string to avoid tension dropping.

Accurate tension setting, 11-89LB (5-40KG), precision of 0.1LB/KG, 9 sets of pounds of memory. High-tech hard anode surface of the string clamp, good clamping force and not easy to hurt the string, suitable for various specifications of string diameter;

Gear brake turntable system, fast and stable;

Independent telescopic boom system, which can adjust the telescopic arm separately to the safest six-point fixed to prevent the racket deformation;

Can be racked from the largest tennis racket 135 square inches to the smallest badminton racket;

The height of the machine can be adjusted from 90cm to 120cm;

Machine external discharge electronic box, gerneral power supply, suitable for voltage 110V~240V.

#### **KES-100**

#### **Automatic Badminton Racket String Machine**

Specification: Six-point Synchronizing clip system, Automatic rotating seat, anti-slipping U-clamp, High Quality Clamp Head, Precise adjustment knob, high pound protector. Synchronizing clip, automatic clamp base, constant pull, four

kinds of pre-stretch. Menu setting. Storage memory.

Characteristic: Storage memory photo electricity sensing; add pounds to knot KG/LB transform; constant pull automatic calibration of pounds; automatic clamp base synchronizing clip; three speed in pulling four kinds of pre-stretch; automatic fault

detection pounds precision, string machine with precise tension force, accuracy to +/-0.1 pounds.

## **SHORTS WEAR**

川崎 の 科學 と 技術

## **Clothing Materials Technology**

TOPCOOL is a type of high performance polyester fibre. It takes advantage of fabric fibre structure to quickly drain and absorb moisture and keep the surface dry ad comfortable. TOPCOOL helps to regulate body temperature.

CoolPass is a type of profiled wicking polyester fibre having built in grooves. The fibre groove structure helps drain sweat faster and keeps your skin dry and more comfortable.

BLCool is a special type of fibre with superior draining function. This is possible by making use "cross" shaped internal fibres, ensuring

CoolNice is a type of fibre designed with four-groove unique cross section and permanent wicking function. This is done by successfully applying the capillary principle to the textile surface to help accelerate absorption and evaporation of sweat. The highprofiled fibre cross-section structure also reduces the contact area with the skin providing a more comfortable feel.

Lenzing Modal® branded fibres from the house of Lenzing are naturally soft on the skin and exceptionally ecological. The fibres are produced using Edelweiss® fibre technology. Edelweiss stands for a "symbiotic" production process - pulp, the raw material, is produced at the same site as the Modal fibre itself.

Since its invention nearly sixty years ago, LYCRA® fibre set the standard as the world's best-known elastane fibre brand. Lightweight and nearly invisible, LYCRA® fibre became the active ingredient in our clothes and revolutionised the way we wore them. Whenever it's used in fabrics, LYCRA® fiber transforms garments into better fitting, durable clothes that move with our bodies, delivering fit, shape and comfort that lasts.

3M™ Scotchlite™ reflective material helps you to be easily visible in dim light conditions.

Three-dimensional

Sweat-absorbent & Quick-drying

The fabric is sweat-absorbent & quick-drying, helps to keep the body dry and comfortable.

Breathable Fabric

Fabric offers good internal air circulation allowing for better body temperature regulation and comfort.

High Elastic Fiber

Fabric consists of elastic fibres, with excellent elasticity to ensure for an easy fit.

Comfortable without the rigid feel of conventional

Laser Engraving

Accurate designs that do not affect the function or

**Bright Fabric** 

Bright colours to ensure high visibility.

Light Fabric

Superior light and comfortable fabric.

Windproof Fabric

High quality windproof materials to ensure warmth.

Thermal Properties

Contains thermal warmth properties for cold

**Static Electricity Prevention** 

Helps prevent static electricity in winter.

The garment can sustain standard washes without deformation or fading.
